DETAILED ACTION

Continued Examination Under 37 CFR 1.114

The request filed on October 14, 2002 for a Continued Examination (RCE) under 37 CFR 1.114 is acceptable and an RCE has been established. An action on the RCE follows.

Amendment Entry & Claim Status

The after-final amendment filed on August 11, 2003 has been acknowledged and entered.

Claims 1-3, 6-12, 24-30 are pending.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-3, 6-12, 24-30 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter, which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The new limitation added to claims 1, 3, 6, 27, 30 that define the cross-linked avidin molecules raises new matter issue. Applicants admit that the specification fails to show clear support. Clear support for the new limitation must be present or disclosed in the specification.

Response to Arguments

The arguments filed on August 11, 2003 have been fully considered but they are not found persuasive.

Applicants admit that support for the new limitation in claims 1, 3, 6, 27 and 30 is inherent in the specification since the specification teaches that avidin undergoes cross-linking before it is combined with the biotin molecules and the fact that the specification fails to discuss any cross-linking taking place other than between subunits of the avidin molecules, it is inherently supports the recitation of a biotin-avidin-biotin complex where only the avidin is cross-linked.

The specification must show clear support on such important limitation of the claimed invention. Such new limitation creates new matter issue if it is improperly supported.

Regarding the art rejections in the previous final office action, they are withdrawn in lieu of this new matter rejection. However, if the added limitation is removed to resolve the new matter issues, these art rejections would be re-applied to the present claims and the next office action would be made final.
